

Inspection Manager for MAXIMO

Product Profile

- **Integrated with MAXIMO**
- **Easy to use**
- **Out of the box, built for purpose, ready to use**
- **Improves data standardization with flexible route, forms and activity lists**
- **Reduces inspection errors**
- **Reduces inspection costs**
- **Accelerates data entry and analysis**
- **Increases data accuracy**

PopWare Inspection Manager helps organizations automate inspection activities with a full function packaged solution that leverages both desktop and mobile platforms to enable and enhance inspection capabilities.

During the course of performing inspections activities, users constantly struggle with data entry errors, slow information flow and data variability which contributes to high cost and low data quality. PopWare Inspection Manager automates inspections, audits, regulatory compliance, and security activities to deliver substantial cost savings, improved productivity and higher quality data.

Inspection Manager helps users capture data at the source, eliminating transcription errors, ensuring consistent data, speeding up information flow and providing personnel with timely information for informed decision-making.

Users can easily set up activity lists, forms and routes to perform inspections, verify activities that have been completed, and record readings. When inspections are triggered, the job information can either be printed on paper forms to capture information that can later be entered into the desktop inspection application for upload to MAXIMO, or downloaded to a mobile device and the inspection data electronically synchronized with MAXIMO.

PopWare Inspection Manager also provides a transaction viewer so users can graphically trend the data or alternatively export the data to Microsoft Excel for analysis purposes.

Inspection Manager is tightly integrated with MAXIMO to support your strategic asset management initiatives. PopWare offers a full turnkey inspection solution, which includes application software, hardware, implementation and training.
